Investment Analyst Brief · November 12, 2026

Thesis: Semiconductor companies benefiting from long-term demand for computing and AI, with differentiated technology, durable customer demand and strong cash flow, at a price that leaves room for a 12% annual return. Wary of high debt, dependence on a few customers, and growth that relies on a short-lived boom. Hurdle 12.0% a year over 5 years · 0 Research · 0 Watch · 6 Pass

Company	Price	Growth / yr	Exit multiple	Annual return	Call	Why
NVDA NVIDIA Corp	$173.73	12.0%	18x	**-0.4%**	**Pass**	Growth and multiple held at the bottom of the 12-22%/18-28x AI-compute range given this week's news that the board is weighing ousting Jensen Huang over an affair/spy scandal, which compounds cloud-customer concentration
